Institutional Policy on Maintenance of Water Body and Distribution Sytem

Introduced from 2016

- The college has two ponds.
- There are scheduled staff members who maintain the water bodies regularly.
- Water bodies are being used for fish cultivation too.
- Rain water from different Hostel buildings are taken to the ponds in such a way that they are not contaminated.
- Rooftops are also kept cleaned so that unnecessary garbage does not make the rain water dirty.
- Water reservoirs are kept above the roof top and also there underground reservoirs.
- As, the underground water in this campus is highly iron-merged, hence the iron filter has been installed in the campus.
- Further, RO machines are operational to make the water drinkable.
- These are automated so that no water overflow occurs.
- From the roof top tanks water is distributed through PVC pipe lines.
- Bore well are also used for garden water.
- In fact the rain water is also used for gardening.
